

I wish to express my opposition to Broadband over Power Lines (BPL) proposal. As a ham radio operator this new mode of internet access will interfere with my ability to use the HF frequencies that I use most often. Allowing BPL will mean I will need to run much more power; I will have to install larger antennas, at greater height. The cost of these station up grades will cost hams all over the world thousands and may at best get us marginal results. The bottom line is we (Ham radio Operators) are a valuable asset to the world and BPL may make communications by skywave impossible for many. Please don't allow BPL to be used until the technology that can prevent the noise inherent to BPL can be invented. As a licensed ham radio operator I try to transmit the cleanest signal possible. From my understanding RF from BPL will be impossible to keep from interfering with HF communications world wide.
